CASE FOR SUPPORT

Why Artemis, Why Now, Why Your Gift Matters

A SELF-SUSTAINING UNIVERSITY. A PERMANENT LEGACY.

THE CASE FOR ARTEMIS

"The world does not need another elite university that serves the few. It needs a great university that serves the many. The University of Artemis is that university."

THE CRISIS IN NUMBERS

Higher education faces a structural crisis that cannot be solved by incremental reform. Tuition costs have risen 4x faster than inflation since 1980, pricing out the majority of qualified students worldwide. In the United States alone, student debt exceeds $1.7 trillion — a figure larger than the GDP of most nations. Meanwhile, in Sub-Saharan Africa, only 9% of college-age individuals can access higher education. South Asia enrolls just 25%. The global higher education market, worth $2.5 trillion annually, serves fewer than 220 million students while over a billion young people will reach university age by 2030.

This is not just an access problem. Employers in 40% of cases report that graduates lack the skills needed for the modern workforce. The disconnect between what universities teach and what the world needs grows wider each year. Traditional universities, burdened by legacy costs, governance structures designed for the 19th century, and business models dependent on ever-rising tuition, cannot adapt fast enough. The system is not broken at the margins — it is structurally incapable of serving the 90% of qualified students who cannot afford current price points.

WHY ARTEMIS

The University of Artemis is designed from first principles to solve the structural crisis in higher education. It is not an online programme, a MOOC platform, or a discount university. It is a fully residential, tutorial-based, research-active university that costs $3,000 per year. The model achieves this through three structural innovations that eliminate 80% of the cost base of traditional universities while delivering superior educational outcomes.

Innovation 1: Repurposed Buildings, Not New Construction

Traditional universities spend billions on campus construction. Harvard's most recent capital campaign allocated $2.5B to facilities alone. Artemis acquires existing buildings — repurposed convents, warehouses, offices, factories — and converts them into Colleges. This eliminates approximately 80% of capital costs. A repurposed warehouse in Kigali costs a fraction of a purpose-built campus. The building is acquired, not leased, ensuring permanent ownership. Each College becomes a self-sustaining unit generating tuition revenue from Day 1.

Innovation 2: The Tutorial System at Scale

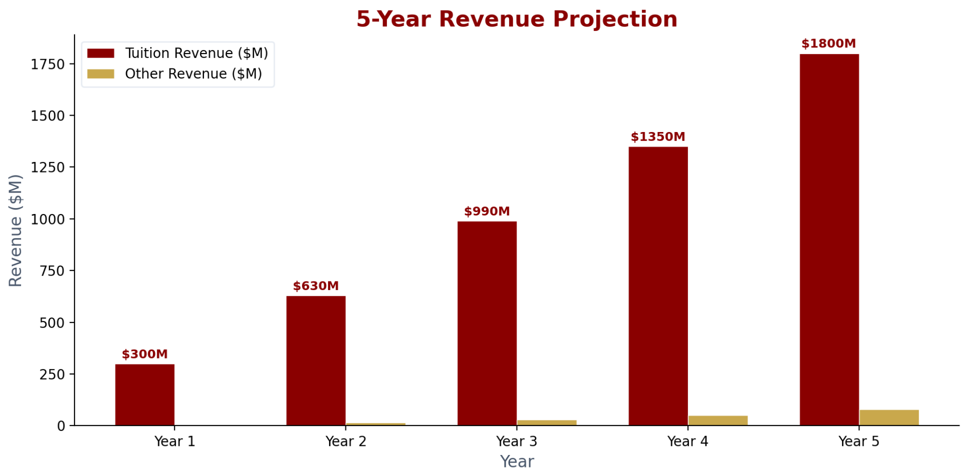
Oxford and Cambridge have proven the tutorial model for 800 years. Artemis scales it globally with a 1:7 faculty-to-student ratio. Tutorials are conducted synchronously across colleges, meaning a student in Kigali attends the same tutorial as a student in San Francisco. Faculty rotate across colleges, bringing diverse perspectives to every session. The tutorial model produces deeper learning than lectures: students must prepare, present, and defend their thinking in every session. There is no back row in a tutorial.

Innovation 3: The Global Rotation Model

Students rotate through 6 cities over 4 years, distributing fixed costs across 50 colleges in 35 countries. This geographic distribution eliminates the monopoly on quality education that single-campus universities create. It also produces graduates with genuine global fluency — not just theoretical knowledge of other cultures, but lived experience across continents. The rotation model means every College contributes to every student's education, creating a network effect that compounds the value of each additional College.

THE FINANCIAL LOGIC

The University of Artemis is designed to be self-sustaining from Year 1. This is not a prediction or a hope — it is a mathematical consequence of the model. At 100,000 students paying $3,000/year, Year 1 revenue is $300M. Operating costs are approximately $262M. The surplus of $38M in Year 1 funds scholarships, builds the endowment, and expands the college network. No ongoing fundraising is required. No government subsidies are needed. The financial engine is permanent.



5-year revenue projection: tuition revenue grows from $300M to $1.8B.

By Year 5, with 300,000 students across 70 colleges, revenue reaches $1.88B with a surplus exceeding $500M. The endowment, seeded at $3M and grown by $60M+ per year from surplus, reaches $1.35B. The university becomes one of the best-endowed institutions in the world within a decade, without a single additional fundraising campaign. This is the power of the model: it converts a one-time seed investment into a permanent, growing, self-sustaining institution.

WHY NOW

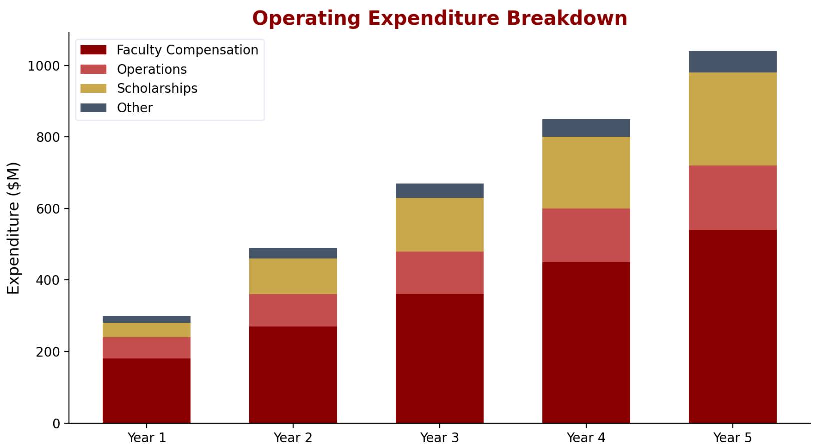
Discussion and collaboration are at the heart of the Artemis model. Image: Unsplash

Three converging forces make this the right moment for the University of Artemis. First, the demand crisis: a billion young people will reach university age by 2030, and existing institutions cannot absorb them. Second, the technology: synchronous global education, once impossible, is now proven at scale. The pandemic accelerated the adoption of remote collaboration tools by a decade. Third, the philanthropic will: donors under 50 increasingly demand measurable, structural impact rather than incremental charity. They want to fund solutions, not symptoms.

The founding of great universities has always been a response to crisis. The University of Bologna was founded in 1088 because students demanded legal education that the church could not provide. The University of Berlin was founded in 1810 because Prussia needed to rebuild after Napoleon. Stanford was founded in 1885 because Leland Stanford wanted to create "useful citizens" after the loss of his son. The University of Artemis is founded because a billion students need education that the existing system cannot provide at a price they can afford.

THE SELF-SUSTAINING MODEL

The founding campaign of $100M is not an operating budget. It is seed capital that creates the permanent physical infrastructure from which the university generates its own revenue. The distinction is critical: most university fundraising campaigns fund operating expenses, building programmes, or financial aid endowments that supplement tuition revenue. The Artemis campaign funds the infrastructure that generates tuition revenue. After launch, no further fundraising is required for the university to operate, grow, and fulfil its mission.



Operating expenditure breakdown showing faculty compensation as the largest cost.

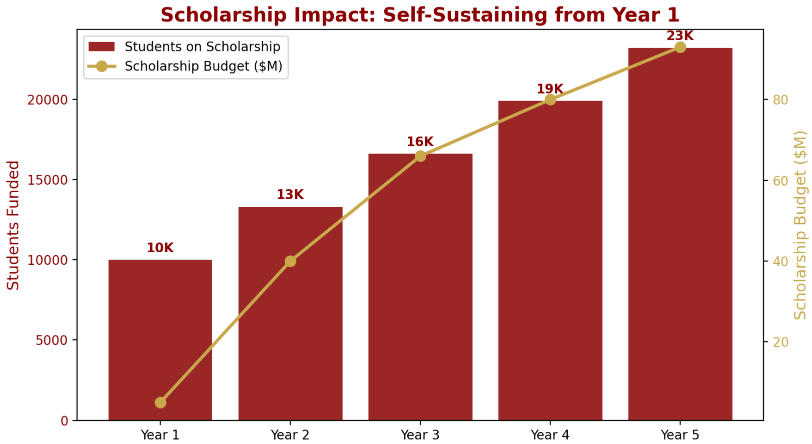
Metric	Year 1	Year 3	Year 5
Revenue	$305M	$1.02B	$1.88B
Operating Costs	$267M	$670M	$1.14B
Surplus	$38M	$350M	$740M
Endowment	$63M	$475M	$1.35B
Students	100,000	200,000	300,000
Colleges	50	60	70

WHY YOUR GIFT MATTERS

Partnership and trust are the foundation of every great institution. Image: Unsplash

Your gift to the University of Artemis is not a donation to an operating budget that needs to be refilled every year. It is an investment in permanent infrastructure that generates its own revenue, funds its own scholarships, and builds its own endowment from Day 1. This is the difference between giving a man a fish and building a fishery. The founding campaign creates the fishery. Every dollar you give is multiplied by the financial engine into perpetual value.

The naming opportunities are endowments, not sponsorships. When you name a College, the College owns the building, the building generates tuition revenue, and the revenue sustains the College in perpetuity. Your name is inseparable from that value. When you endow a Distinguished Professorship, the $5M at 4.5% yield generates $225K per year — enough to sustain one faculty position forever. The gift compounds: it funds the position, the position produces research, the research builds reputation, the reputation attracts students, the students generate revenue, the revenue funds more positions.



Scholarship impact: self-sustaining from Year 1, growing every year thereafter.

THE ASK

We are asking for $100M in 12 months to seed a self-sustaining university that will serve 100,000 students in its first year, grow to 300,000 within five years, and generate over $1.8B in annual revenue by Year 5. The $100M is not a cost — it is the purchase price of permanent infrastructure that will educate millions of students over the coming centuries. Your gift creates the foundation. The financial engine does the rest.

70% of the campaign will come from 10 lead donors. This is how founding campaigns work. We are seeking partners, not patrons — individuals and institutions who see the structural opportunity and want to be part of the founding of a university that changes the trajectory of human education. The Founders' Circle, at $10M+, carries the highest naming opportunities and the deepest institutional connection. But every gift matters: a $12,000 scholarship fund changes a student's life permanently.

Donor Segments: $100M by Source
