

A background image showing numerous cells, likely cancer cells, stained with blue and red fluorescent dyes. The cells are irregular in shape and size, with some showing prominent nuclei. The blue staining highlights the nuclei, while the red staining highlights the cytoplasm and other cellular structures. The overall image has a dark, almost black, background, making the fluorescent cells stand out.

CENTERS OF INQUIRY

Research Portfolio: 19 Centers, 42 Projects, Open Knowledge

KNOWLEDGE IS A PUBLIC GOOD. RESEARCH IS A PUBLIC DUTY.

THE ARTEMIS RESEARCH MISSION

Research is integral to the Artemis mission, not peripheral. Image: Unsplash

The University of Artemis is a research-active institution from Day 1. Research is not a peripheral activity that exists alongside teaching — it is integral to the academic model. Faculty allocate 30% of their time to research, and every student participates in a research project before graduating. The 19 Centers of Inquiry are the organisational units for research, each focused on a specific domain of inquiry and each producing open-access knowledge under the university's 7-year mandatory release policy. This policy ensures that all research produced at Artemis becomes publicly available within 7 years of publication, because knowledge is a public good and research is a public duty.

THE 19 CENTERS OF INQUIRY

1. Center for the Ethics of Emerging Technology

Examines the moral dimensions of AI, biotechnology, surveillance, and other emerging technologies. Current projects include: Algorithmic Fairness in Global Hiring, The Ethics of Autonomous Weapons, and Consent Architecture in Digital Health.

2. Center for the Geometry of Social Systems

Applies mathematical modelling to social phenomena: network effects, collective behaviour, and institutional dynamics. Current projects include: Modelling Institutional Decay, Network Topology of Social Movements, and Phase Transitions in Public Opinion.

3. Center for Global Health Equity

Focuses on the structural determinants of health outcomes across populations. Current projects include: Malaria Elimination in Southeast Asia, Maternal Health in Sub-Saharan Africa, and Health System Resilience Under Climate Change.

4. Center for Constitutional Design

Studies the design and durability of constitutional frameworks in diverse societies. Current projects include: Constitutional Resilience in New Democracies, Federal vs Unitary Structures in Multi-Ethnic States, and Digital Rights as Constitutional Rights.

5. Center for Computational Cognition

Investigates the computational foundations of human cognition. Current projects include: Neural Architecture Search for Cognitive Modelling, Language Acquisition in Multilingual Environments, and Decision-Making Under Uncertainty.

6. Center for Environmental Systems

Studies the interactions between human systems and natural environments. Current projects include: Urban Heat Island Mitigation, Carbon Capture Viability Analysis, and Biodiversity Loss in Agricultural Landscapes.

7. Center for the History of Institutions

Examines how institutions form, persist, and transform across centuries. Current projects include: The University as Institutional Form, Corporate Governance Through the Ages, and Religious Institutions and Knowledge Production.

8. Center for Migration and Mobility

Studies the patterns, policies, and human experiences of global migration. Current projects include: Climate Migration Projections, Integration Outcomes in Second-Generation Migrants, and Border Policy Comparative Analysis.

9. Center for Financial Architecture

Analyses the design of financial systems and their impact on economic outcomes. Current projects include: Microfinance Impact in South Asia, Central Bank Digital Currency Design, and Financial Inclusion Through Mobile Banking.

10. Center for Educational Innovation

Researches new approaches to teaching, learning, and assessment. Current projects include: Tutorial Effectiveness Measurement, Competency-Based Assessment Validity, and Global Rotation Learning Outcomes.

11. Center for Urban Resilience

Studies how cities adapt to shocks and stresses. Current projects include: Flood Resilience in Delta Cities, Pandemic Response in Dense Urban Areas, and Infrastructure Resilience Under Sea-Level Rise.

12. Center for the Philosophy of Knowledge

Investigates foundational questions about knowledge, truth, and justification. Current projects include: Epistemic Injustice in Global Contexts, The Reliability of Crowdsourced Knowledge, and Post-Truth Epistemology.

13. Center for Creative Production

Studies the processes, economics, and impact of creative work. Current projects include: The Economics of Open-Access Publishing, AI-Assisted Creative Processes, and Cultural Production in Digital Environments.

14. Center for Data Justice

Examines the equitable and ethical use of data in society. Current projects include: Algorithmic Bias in Criminal Justice, Data Sovereignty for Indigenous Communities, and Privacy-Preserving Analytics for Social Good.

15. Center for Agricultural Systems

Researches sustainable and equitable food production systems. Current projects include: Regenerative Agriculture in East Africa, Vertical Farming Economic Viability, and Smallholder Market Access in South Asia.

16. Center for Space and Planetary Sciences

Studies Earth observation, space exploration, and planetary science. Current projects include: Satellite-Based Deforestation Monitoring, Lunar Resource Mapping, and Mars Habitat Design Constraints.

17. Center for Linguistic Diversity

Documents, preserves, and analyses the world's linguistic heritage. Current projects include: Endangered Language Documentation in the Amazon, Machine Translation for Low-Resource Languages, and Multilingual Education Outcomes.

18. Center for Peace and Conflict Studies

Investigates the causes, dynamics, and resolution of armed conflicts. Current projects include: Civil War Duration Analysis, Peace Agreement Durability Factors, and Climate Change as Conflict Multiplier.

19. Center for the Study of the Future

Develops frameworks for anticipating and shaping long-term futures. Current projects include: Scenario Planning for Global Higher Education, Existential Risk Assessment Methodology, and Intergenerational Justice in Policy Design.

THE 7-YEAR RELEASE POLICY

All research produced at the University of Artemis is released under open-access terms within 7 years of publication. This policy ensures that the knowledge generated by the university — much of it funded by charitable gifts — is available to everyone, not just those with access to expensive journal subscriptions. The 7-year window allows researchers to establish priority and attract follow-on funding while ensuring that knowledge ultimately becomes a public good. The Artemis Press publishes all research outputs, including working papers, journal articles, monographs, and datasets, under Creative Commons licences that permit free redistribution and reuse with attribution.
